### Why Fibra Hemp Bedding?

Choosing Fibra means superior comfort, health, and sustainability. Our commitment to quality ensures that you provide the best care for your horse while also supporting British Farming. With Fibra, you can rely on:

- **Dust-Extracted Environment:** Our bedding undergoes thorough dust extraction, making it ideal for horses with respiratory sensitivities. Maintaining a dust-extracted stable is essential for preventing respiratory issues and ensuring your horse's well-being.
- **Superior Absorbency:** Fibra hemp bedding is more absorbent than straw, cardboard and wood shavings.
- **Locally Sourced:** Fibra hemp bedding is proudly grown and processed in the UK, using environmentally friendly farming practices free from pesticides. This ensures a safe and high-quality product for your horse.
- **Effective Odour Control:** The natural properties of hemp effectively trap and neutralise odours and ammonia, ensuring a fresh-smelling and hygienic stable environment for your horse.
- **Eco-Conscious Choice:** It quickly decomposes into a rich organic fertiliser, making disposal simple and beneficial for your land.
- **Cost-Effective Solution:** Our long-lasting bedding reduces the frequency of bedding changes, saving time and money.

### Easy-to-Follow Usage Instructions

1. **Initial setup:** Use 6 – 8 bales to create a thick, absorbent base layer, for a typical 4m x 4m stable. This provides a comfortable and dry top layer with optimal support for your horse.
2. **Daily Maintenance:** Remove droppings and level the bed with a rake to maintain a clean and even surface.
3. **Weekly Maintenance:** Once a week, rake the dry bedding to one side and remove the wet bedding from the bottom layer. Add fresh Fibra hemp bedding as needed to maintain a comfortable, odour free and hygienic bed

### Recommendations:

- Ensure your horse has a balanced diet to prevent it from eating the bedding.
- Store bedding in a well-ventilated, dry environment.
- Handle with care to avoid damaging the packaging and compromising performance of the product.
